DATALINK
empowering better health

EvokeConnect

Streamline clinical data collection and management with EvokeConnect

DataLink can help by bringing quality and risk together,
breaking down silos and helping locate data you may be missing

With EvokeConnect, we have the ability to connect with 95% of your provider network, seamlessly accessing richer, more accurate data to bring true interoperability to your organization.

Rapid installation
With an efficient, proven implementation and omit process, you'll begin receiving valuable data within as little as 30 days of launch.

One chart, one charge per year
No more paying for the same member chart multiple times in a year. All charts are stored and updated when new chart data is available.

Reduce administrative burden
Data flows smoothly from the EHR into standardized data submission files for CMS and NCQA, freeing up resources to have greater impact on your program.

Prospective gap closure
Get valuable data earlier in the year, so you're not wasting valuable resources chasing charts at the end of the year.

Safety and security
With our HITRUST certification and SOC2 Type 2 attestation, and by using FHIR, HL7, and secure retrieval and data encryption, data is always protected.

Break down data silos with DataLink

You may be missing or have conflicting data and we can help. Seamlessly access data inside a chart in near real-time for both quality management and risk score accuracy. Break down silos, save time, and reduce expenses.

Accelerate and improve HCC recapture

Ensure risk accuracy
Access accurate data and gain valuable insights to improve risk adjustment accuracy and improve both HCC recapture and reimbursement rates.

Reduce chart chasing
Access critical clinical data often missed in the claim process to avoid potential errors in risk adjustment.
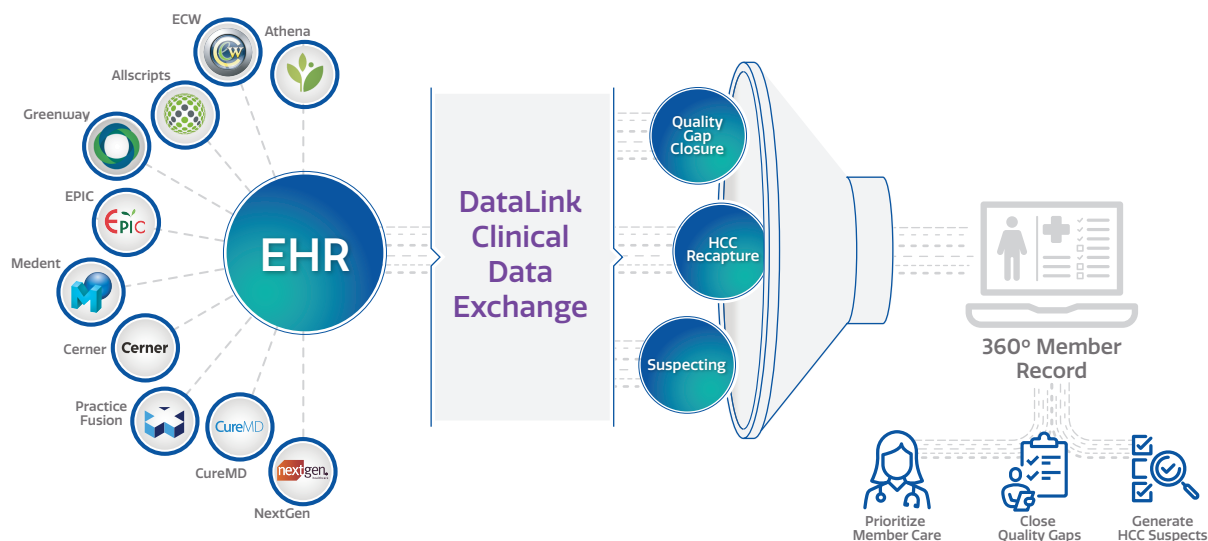

Close quality gaps

HEDIS®, STAR Ratings, state–specific measures
Use EHR data to improve performance by closing gaps for HEDIS, state-specific, and other quality measures important to your organization.

We're DAV certified
Our Data Aggregator Validation certification ensures that all charts through our platform won't need primary source verification.
